FonectaGuard

Connect's 24/7 guardian for every local business.

Connect goes to them.

SINCE AI HACKATHON 2026
FONECTA CHALLENGE · CONNECT SUGGESTS, CUSTOMER APPROVES

24 DECEMBER · KAHVILA AURORA

FonectaGuard

THE PROBLEM

Google said open until 18:00. Aleksi had closed at 13:00.

46 people looked at the listing that day last year

The owner is busy and never logs in. A wrong holiday hour costs walk-ins, and nobody tells him.

AI assistants repeat it too. Of 37 real Helsinki cafés we tested, **51%** had an assistant answer that disagreed with their own website, and **78%** were mixed up with a different business.

ATE	GOOGLE SHOWS	SUGGEST	CONF. · TIER	STATUS	WHY
026-12-06 NDEPENDENCE_DAY	10:00–16:00	closed or 11:00–16:30 ?	73% ask: pick one	sent	Based on the pattern of similar businesses and history on other days. ⚠ About 46 people will look up your hours on day.
026-12-24 MAS_EVE	07:30–18:00	07:30–13:00	91% one tap	applied	Last year you entered 07:30–13:00 for this day ⚠ About 46 people will look up your hours on day. On the same day last year 46 people saw Google and 5 asked for directions, called or o website.
026-12-25 MAS_DAY	07:30–18:00	closed	99% autopilot ≥95%	applied	Last year you entered closed for this day. 88% businesses that set hours for this day are clos ⚠ If nothing changes, Google will tell about 54 you are open. On the same day last year 54 p on Google and 3 asked for directions, called o website.
026-12-26 OXING_DAY	09:00–18:00	closed or 10:30–16:30 ?	76% ask: pick one	sent	Based on the pattern of similar businesses and history on other days. ⚠ About 96 people will look up your hours on day. On the same day last year 96 people saw Google and 7 asked for directions, called or o website.
027-01-01 EW_YEARS_DAY	07:30–18:00	closed	99% autopilot ≥95%	draft	Last year you entered closed for this day. 74% businesses that set hours for this day are clos ⚠ If nothing changes, Google will tell about 22 you are open.

REAL SUGGESTION ROWS, FONECTAGUARD CONTROL ROOM

THE IDEA

A guardian, not a detector

1
Detect
A model reads the owner's history, peers, Google edits, mall hours, events

2
Suggest
One answer per day, a reason in plain words, a confidence

3
Contact
One message in his language on his channel

4
Decide
Approve, edit, pick, or say no. No login

5
Apply
Written to Yext, read back, where it shows, undo

Never sleeps: the guardian wakes every 15 minutes. It watches opening hours for every special day, listings across directories, what AI assistants say, and profile gaps. **When something is wrong it acts**: asks, escalates, fixes with approval, and verifies.

HOW IT WORKS

From signal to a verified change

Signals
Owner history · Google user edits · peers · shopping-centre hours · events · school breaks

→

Model
LightGBM, about 140 signals per business and day

→

Tier
autopilot ≥ 0.95 · one tap ≥ 0.80 · ask below

→

Owner
His language, his channel. He decides, no login

→

Yext
Write, read back, verify, undo

The floor, in plain code: owner rules ("never close on Fridays"), opt-outs and validation override the model, the agent and autopilot.

It learns: every edit, approval and "no" is remembered per owner and day, so the next season starts from him, not from peers.

FonectaGuard

DATA SOURCES THAT MATTERED

Five signals, where they come from in production

SIGNAL	HOW WE USED IT	IN PRODUCTION
Owner's own exception-hour history	Same day last year and two years ago, the 2025 pilot outcomes, habits across holidays. The strongest signal.	Yext holidayHours history, Connect's approval log
Google users' date-specific edits	Strong but sparse. A high-precision candidate and the trigger for the closed-for-good flag.	Yext Listings › Publisher Suggestions
Shopping-centre hours, incl. last year's	Tenants follow the centre: this year's hours if published, else last year's pattern.	The centres' own websites
Peer benchmarks	Share of similar businesses closed or open that day. The only help for new customers.	Aggregates over Connect's customers
Local events and school breaks	Arena nights extend pub hours; school holidays extend play-centre hours.	Helsinki LinkedEvents, municipal calendars

FonectaGuard

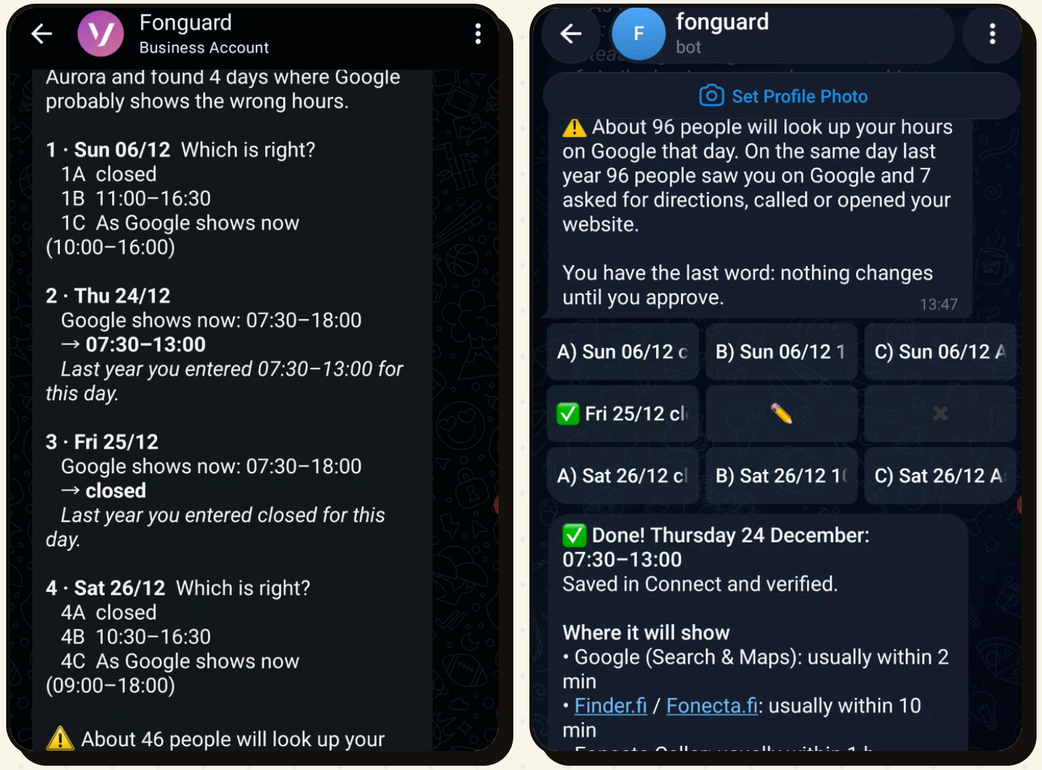

Seven doors. One score decides which, and when.

- WhatsApp
- Telegram
- E-mail
- SMS
- Web link
- Voice note
- Phone call

score = confidence × urgency

urgency 1.0 within 24 h of the day, 0.7 within 48 h, 0.4 within 72 h. Critical at 0.5.

Message → **reminder** after 3 h → **voice note** after 4 h more → **phone call** only if the score is ≥ 0.75, the day had ≥ 20 views, 08:00–20:00 local, once a day. Opt-outs and the owner's rules stop everything.

WHATSAPP AND TELEGRAM · REAL TAKES

A REAL GENERAL AGENT

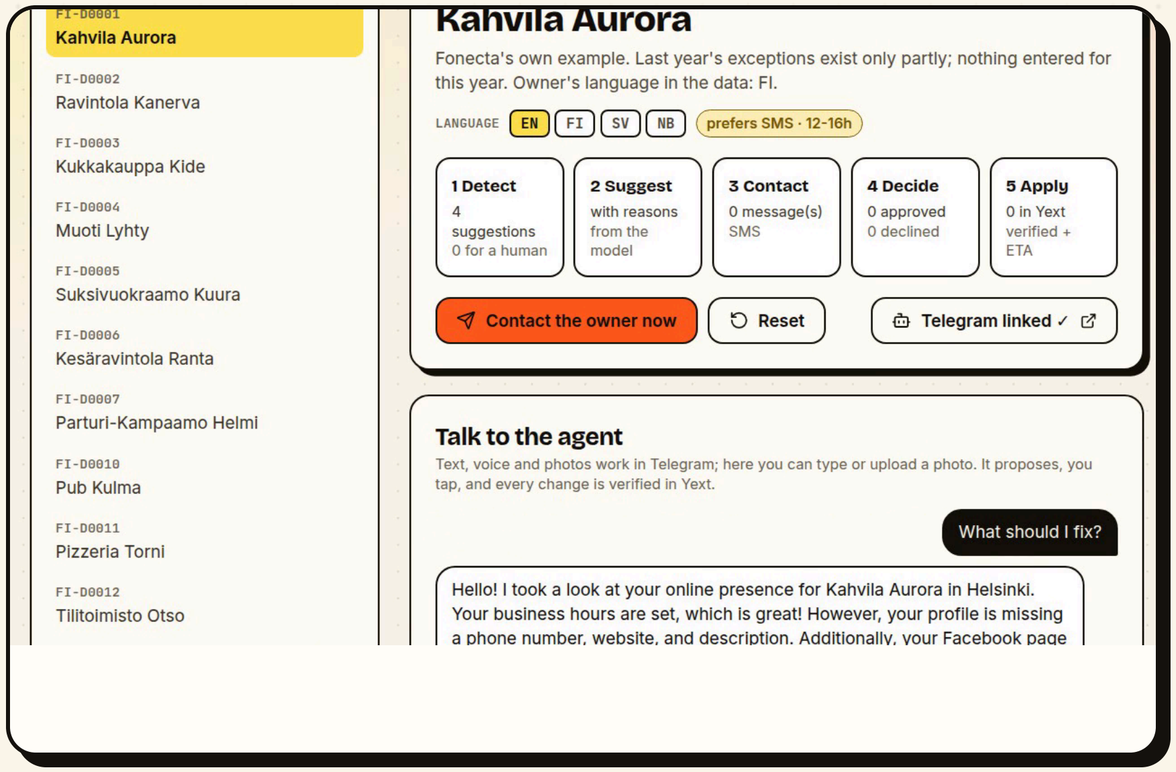

Ask it anything. It proposes, he confirms.

Text, voice or a photo of the sign on his door: hours, closures, phone, website, address, description.

"What should I fix?" One radar for hours waiting, listings, profile gaps and what AI assistants say.

Safe by construction: only a fixed set of validated changes, text in a photo is data not instructions, nothing applied without a tap, undo for every change.

His rules win. "Never close on Fridays" is plain code, not a model.

MEASURED HONESTLY

63.3 against a 54.5 baseline

OUT-OF-FOLD SCORE ON THE DEV LABELS

Every business scored by a model that never saw it. 2025 back-test about 60.3. When it suggests, precision about 0.85 and recall about 0.70. With history about 95% of days right, without about 55%.

What didn't work: an in-sample 77.8 leaked training labels, so we retracted it. Reviews and analytics are weak triggers. Customers with no history stay the hard case.

No history (FI-D0017): one suggestion where peers agree (closed 25 Dec, 86% of peers) and two questions instead of guesses.

Confidence decides the ask: autopilot at ≥ 0.95 (94.5% exact), one tap, or a choice "which is right?".

FonectaGuard

BUSINESS IMPACT

From a place owners update, to one that updates them

99% of businesses have days like this

≈ 160 people a season see the wrong hours

× 100,000 Connect customers

≈ 14 million

ORGANISER'S DATA, EXTRAPOLATED TO 100,000 CUSTOMERS AT 85% PRECISION

Revenue: customers who find the door open instead of a locked one.

Market: a proactive layer Connect can offer all 100,000 customers, beyond opening hours: listings, AI answers, profile gaps.

Why now: AI assistants are the new front door, and owners will not log in to fix each one.

WHERE IT STANDS

Built, tested, ready to scale

Running today

Yext sandbox write, read-back and undo · WhatsApp (two-way) · Telegram · e-mail · no-login page · ElevenLabs voice notes · the agent with photo, voice and text · owner rules · the escalation policy · the 15-minute guardian cron.

Built and tested

The phone-call step with keypress approval (Vonage, 46elks and Twilio adapters) · two-way SMS · photo, phone, address and website changes with validation · switched on by adding a telephony key.

Next: a pilot on real Connect history · more detectors on the same radar (photos, reviews, menus) · learning per owner across seasons. Licences: MIT, Apache-2.0, BSD-3 and ISC components, no GPL or AGPL. Data is the organiser's synthetic set.

Connect goes to them. `fonectaguard.arcumet.com`
